

### 1 DONIC BLUE CONTACT

The DONIC Blue Contact Glue has been specially developed to improve the playing effects of large-pored sponges such as the DONIC Bluefire series. The glue's viscous consistency guarantees a strong adhesion but also allows the rubber sheet to be easily detached when changing rubbers without damaging the sponge. In addition, if several layers of the glue are applied, spin and speed playing qualities of the rubber are enhanced.

90 ml bottle in set with accessories

Art.-N° 600 282 000

1 litre polythene screw cap bottle without accessories  
Art.-N° 600 283 000

### 2 DONIC VARIO CLEAN

The DONIC Vario Clean has been developed according to the ITTF regulations. Without any volatile organic compounds (VOC) this water-based glue guarantees that the rubber sheet can be applied without any health risk. Easy handling and fast drying are two more characteristics of this top product.

**Application:** Apply the glue evenly on blade and rubber sheet using the clip fixture and sponge (included). After approx. 5 minutes apply the rubber to the blade using a pressure roll. If possible store the glue in a cool place. Made in Germany.

Available: 37ml / 90ml / 500ml refill pack

37ml Art.-N° 600 271

90 ml Art.-N° 600 272

500 ml Art.-N° 600 274

### 3 DONIC FORMULA FIRST

The DONIC Formula First is the ideal glue to apply all kinds of table tennis rubber sheets to the blade, especially the DONIC Formula rubber sheets with their high tension and speed glue effect. Perfect adhesion is achieved with DONIC Formula First. This water-based glue contains no volatile organic compounds (VOC) and complies with the ITTF regulations for table tennis glue. Made in Germany

Available: 25 gr bottle with integrated sponge / 500 gr refill bottle

25 g Art.-N° 600 276

500 g Art.-N° 600 279

### 4 DONIC FORMULA WOOD SEALING

Newly developed water-based lacquer without any volatile organic component (VOC) for the sealing of table tennis blades. Available: 25 gr / 100 gr

25 g Art.-N° 600 296

100 g Art.-N° 600 297

### 5 DONIC GLUING FOIL

Gluing foil without any volatile organic component (VOC). Ideal for a first application of rubbers to the blade. Also suitable for pimples out rubber sheets without sponge.

Art.-N° 600 281

## FORMULA DONIC - Care instructions:

Due to the inbuilt speed glue effect FORMULA DONIC rubber sheets have increased tension which gives faster speed, higher spin and an improved bounce of the ball.

These high performance rubbers are more sensitive to outside influences and are more fragile than the classic rubber sheets, which have not been speed glued (e.g. DONIC Vario series).

The lifespan of each FORMULA DONIC rubber sheet varies, naturally, with the type of player, type of rubber, strain on the rubber and care by the owner. The lifespan, however, is considerably higher than that of the classic speed glued rubber sheet. Compared to an unglued classic rubber you can expect a lifespan of about 60 to 80 per cent.

#### Please note:

1. FORMULA rubber sheets should not be removed and glued again repeatedly.
2. The regular cleaning of the top sheet with VOC free DONIC cleaners or water is highly recommended.
3. The FORMULA DONIC rubber sheets should be protected against daylight or mechanical destruction by using the DONIC bat wallets.
4. Due to the higher tension of the FORMULA DONIC rubber sheets, the edges can break/crumble more easily. In order to avoid this, please use DONIC edge protection tape.
5. The bat must be protected against cold and heat. Particularly in midsummer and in winter you have to be careful that the bat with FORMULA DONIC rubber sheets is not exposed to very high or low temperatures. These extremes can cause the top sheet to become rough/brittle at low temperature and swell up at high temperature resulting in the life of the rubber being shortened. This means don't leave your bat in your car or in too cold or hot rooms for a long time!
